- Create the database for Mr. Majao Shoes Shop and save it as "MajaoShoesDB".
- Create the given Customers and Purchases tables within MajaoShoesDB.
- Use Form Wizard to create a form that enables Mr. Majao to enter customers and purchases data using one form. Use the form created to enter the sample data provided. Save the form as "CustomersPurchasesform".
- Use Customers and Purchases tables to create a one-to-many relationship between the two tables.
- Add mathematical formula to the form created in 1 (c) that enables Majao to view the total amount of money that each customer spent and the number of pairs bought.

- (f) Create a query that enables to check customers' purchase details. The details include customer ID, first name, surname, Phone number, date purchased, pairs of shoes and amount paid for each day. Save the query as "customerspurchases".
- (g) Create a query which enables to view customer's first name, surname, dates and shoes category for customers who bought ladies or kids shoes. Save the query as "bought ladies or kids shoes".
- (h) Create a parameter query that enables to search for any customer using customer's surname and display his purchase records. Save the query as "search a customer by surname".
- (i) Create a report that search and prints customers' purchase records by their surnames. Save the report as "Report of Customers by surname".
- (j) Create a report that will enable Majao to print records of all customers who bought men shoes. Save the report as "Men shoes only report".
