SECTION A (10 marks)
COMPREHENSION AND SUMMARY WRITING

Typical of the African Savannah is a scene which shows signs of the wet and dry seasons. In the dry season, the deciduous trees slowly lose their leaves, the grasses turn yellow and dry up, rivers diminish in size and sometimes disappear entirely, and the landscape assumes a dusty, yellow-brown appearance. The few trees scattered among the grass are specially adapted to withstand the heat and aridity of the dry season. They shed their leaves to avoid excessive transpiration. They also have long roots and sometimes as in the case of the huge baobab tree, they store moisture in their trunks. In the dry Savannah the stunted bushes have very thin leaves and thorns which reduce transpiration to a minimum. Indeed, in the very dry seasons, the landscape resembles more open thorn forest than the conventional picture of the Savannah.

The tall, unusually coarse Savannah grasses grow in bunches or tufts often separated by patches of bare soil. Their stalks are stiff and harsh and in the dry season they burn readily. Since they do not provide natural hay the wild herbivorous animals such as giraffes and zebras in East Africa rely on the tender new shoots along the river banks or the lake shores. The regular movement animals, together with the carnivores such as the lion and leopard which follow them, is accompanied by the dry season big sport of hunting, nowadays with the camera as well as rifle.

The temperature reaches its highest levels just before the onset of the rains. These rains preceded particularly in West Africa, by wind storms in which strong convection currents, set up by the heat, whirl about the dust in a most unpleasant manner. As soon as the moist air stream has sufficiently penetrated the hot and dry areas, the dust storms turn into torrential rainstorms with violent thunder and lightning. Indeed, much of the rainfall in the wet season falls in a series of quite widely separated convectional storms, so that it is wrong to think of the wet season as a time of almost continuous rain.

The onset of the rains causes a marked and sudden change in the whole landscape. The rivers become swollen and sometimes flood. The dry brown earth becomes clothed with a green sheen of new grass. Water-conserving bulbs and tubers throw up shoots and the trees burst into leaf. The grass grows at an astonishing rate and varies in height from four to twelve feet according to the rainfall and location. But the heavy convectional rain, despite its obvious value, brings with it the problem of soil erosion. In many parts of the Savannah, overgrazing by the wild animals, particularly near their water-holes, and by the Africans' herds of cattle, has exposed the bare earth to both sheet and gully erosion. This danger has been increased by the over-cutting of the wooded areas for fuel and by poor farming methods which ruin the fertility of the soil. The result is that in many parts of the Savannah the people can only scrape a bare living out of the land. The people's progress is made more difficult by the occasional ravages of locusts which destroy ever green shoot in their path, and also by the disease spread to cattle by the tsetse fly.

QUESTIONS

1. For each of the items (i) – (x), choose the correct answer from among the given alternatives and write its letter beside the item number in the answer booklet provided.

 - B the harsh climate of the African Savannah and its effect on plants and wild game
 - C how life is sustained in the African Savannah despite its capricious weather
 - D soil erosion and the spread of cattle disease by tsetse fly in the African Savannah
 - E problems of soil erosion caused by poor farming methods.

2. Read and summarise the following passage. Use about 40 words

Tuesday is a lucky day according to the Talmud, books of Jewish teachings. In fact, the old folk rhyme declares, "Tuesday's child is full of grace". Grace, in this case, means special blessings from heaven. Tuesday is also the day of Mardi Gras, the carnival of singing, dancing and merrymaking before the fasting and prayers of the Christian Lent. Other groups of people think Tuesday is unlucky. The Hindus avoid doing business or starting a long journey on a Tuesday. In Greece and Albania, Tuesday is considered a bad day for any important event to take place.
