

**THE UNITED REPUBLIC OF TANZANIA
NATIONAL EXAMINATIONS COUNCIL
DIPLOMA IN SECONDARY EDUCATION EXAMINATION**

732/2A

**CHEMISTRY 2A
(ACTUAL PRACTICAL A)**

Time: 3 Hours

Thursday, 17th May 2012 a.m.

Instructions

1. This paper consists of **three (3)** questions.
2. Answer **all** questions.
3. Question 1 carries **forty (40)** marks and the rest carry **thirty (30)** marks each.
4. A qualitative analysis guide pamphlet for answering question number 3 may be used.
5. Cellular phones are **not** allowed in the examination room.
6. Mathematical tables and non-programmable calculators may be used.
7. Write your **Examination Number** on every page of your answer booklet(s).
8. The following constants might be useful in your calculations:

Atomic masses:

H = 1; C = 12; O = 16; Na = 23; S = 32; K = 39; Mn = 55.

1 Litre = 1dm³ = 1000cm³.

Volume used (cm ³)	
Initial volume (cm ³)	
Final volume (cm ³)	
Titration No.	

1. You are provided with the following requirements:

NN: A solution made by dissolving 2.5 g of potassium permanganate (KMnO_4) in distilled water to make 500 cm^3 of a solution.

LL: A solution of 5.67 g of oxalic acid ($\text{H}_2\text{C}_2\text{O}_4 \cdot \text{XH}_2\text{O}$) in distilled water to make 750 cm^3 of a solution mixture;

Dilute sulphuric acid ($2\text{M } \text{H}_2\text{SO}_4$);

Thermometer.

Procedure:

- (i) Place the beaker containing about 150 cm^3 of tap water into a 200 cm^3 . Maintain the temperature of water at above 80°C . This is your water bath.
- (ii) Put solution NN into a burette.
- (iii) Pipette out 20 cm^3 (or 25 cm^3) of LL into a clean conical flask. Add to it 25 cm^3 of H_2SO_4 and heat the mixture until the solution attains a temperature of $70^\circ\text{C} - 80^\circ\text{C}$; then titrate it against hot solution mixture of LL until permanent colour change occurs.
- (iv) Repeat procedure (i) and (iii) three more times.

Questions:

(a) Record your results in tabular form as shown in Table 1.

(i) Table 1: Titration results.

Titration No.	Trial	1	2	3
Final volume (cm^3)				
Initial volume (cm^3)				
Volume used (cm^3)				

- (ii) State clearly what you have observed in terms of colour change at the end point.
- (iii) Find the average titre volume.

(b) Show:

- (i) the half- reaction equations for the reacting species.
- (ii) net ionic equation for this experiment.

(c) Calculate the:

- (i) molarity of potassium permanganate.
- (ii) concentration of potassium permanganate in g/dm^3 .

(d) Determine:

- (i) concentration of $\text{H}_2\text{C}_2\text{O}_4 \cdot \text{XH}_2\text{O}$ in g/dm^3 .
- (ii) concentration of $\text{H}_2\text{C}_2\text{O}_4$ in mol/dm^3 .
- (iii) concentration of $\text{H}_2\text{C}_2\text{O}_4$ in g/dm^3 .
- (iv) value of X in $\text{H}_2\text{C}_2\text{O}_4 \cdot \text{XH}_2\text{O}$.

(e) If H_2O is regarded as an impurity, find the percentage purity of the acid.

2. You are provided with the following materials:

P: A solution of 0.25M $\text{Na}_2\text{S}_2\text{O}_3$ (sodium thiosulphate);

Q: A solution of 0.5M HCl ;

Distilled water;

Stopwatch;

Small beaker (50cm^3);

Two 10cm^3 measuring cylinders.

Procedure:

- (i) Put an empty beaker (50cm^3) on top of the clear mark "X" printed on the white piece of paper in such a way that the mark is clearly seen from the top of the beaker.
- (ii) Using a 10cm^3 measuring cylinder (or burette) measure out 4cm^3 of **P** and 6cm^3 of distilled water and put them in the 50cm^3 beaker on top of the piece of paper.
- (iii) Using another 10cm^3 measuring cylinder (or burette) measure out 10cm^3 of **Q** and at a convenient time pour **Q** into the beaker containing **P** and distilled water; and immediately start the stopwatch.
- (iv) Record the time taken to cause enough precipitations to hide completely mark "X" on the beaker.
- (v) Repeat the experiment with other concentrations as shown in Table 2.1.

Table 2.1: Experiment procedure

Experiment No.	Vol. of $\text{Na}_2\text{S}_2\text{O}_3$ (cm^3)	Vol. of H_2O (cm^3)	Vol. of HCl (cm^3)
1	4	6	10
2	6	4	10
3	8	2	10
4	10	-	10

Record your results in tabular form as shown in Table 2.2.

Table 2.2: Experimental results

Experiment No.	Vol. of $\text{Na}_2\text{S}_2\text{O}_3$ (cm^3)	Time t (s)	$\frac{1}{t}(\text{s}^{-1})$
1	4		
2	6		
3	8		
4	10		

Questions:

- (a) State why:
- the precipitated were formed in this experiment.
 - did it take shorter time for the cross to disappear in experiment 3?
- (b) Given that the volumes of individual solutions are directly proportional to their concentrations and the rate of reaction is given by the equation:

$$\text{Rate} = k[\text{S}_2\text{O}_3^{2-}]^m [\text{HCl}]^n$$

- Calculate the value of **m**.
 - Write a balanced ionic equation for reaction for this experiment.
 - Given that the value of $n = 2$, find the value of **k**.
 - Write the rate law of the reaction in this experiment.
 - Find the rate of reaction when the time taken for letter “X” to disappear is 24 seconds.
- (c) Explain how the rate of reaction will be affected if :
- the concentration of HCl is increased.
 - warm thiosulphate solution is used.

3. You are given sample of compound **T** which contains one **cation** and one **anion**.

- (a) Carry out a qualitative analysis to identify the cation and anion present in salt using the tests provided in Table 3.

Table 3: Experimental results

S/N	Experiment	Observation	Inference
(a)	Appearance of sample		
(b)	Flame test.		
(c)	Solubility.		
(d)	Action with heat.		
(e)	Action with dil. H_2SO_4		
(f)	Action with concentrated H_2SO_4 .		
(g)	Action with aqueous NaOH .		
(h)	Action with aqueous NH_3 .		
(i)	Action with potassium chromate solution.		
(j)	Action with potassium iodide solution followed by heating.		
(k)	Action of sample solution with FeSO_4 and concentrated H_2SO_4 .		

- (b) Write a conclusion of the results indicating the following:

- The cation and anion.
- Molecular formula of a salt.

- (c) Write the reactions equation to:

- illustrate what took place in experiment (d).
- ionic equation for reactions in experiment (g).
